DETAILED ACTION

1. Claims 1-7 are pending in this application.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1. The term "is grown on" raises the questions as to what is grown on and where does such grown on take place?

Claim 2. In lines two and three, the parenthesis do not pair up and raise questions concerning relationships.

Claim 6. The term "so that forming a cell network" does not appear to modify the previous phase and raises the question of purpose of such term.

Claims 3-5 depend from rejected dependent claims and are consequently rejected.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 2-7 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Independent claims 2 and 6 are method claims representing abstract processing of data. The invention must have a result that is a practical application.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Buitenweg et al. (IEEE, 0-7803-7211-5/01, Nano-Ampere Stimulation Window for Cultured Neurons on Micro-Electrode Arrays, referred to as **Buitenweg**).

8. Buitenweg anticipates at least a “multi electrode array” (MEA), over which an homogeneous culture of interconnected neurons, so that forming a cell network, is grown on, whereon said MEA is able to stimulate and record the elect activity of said neurons (**Buitenweg**, page 725, Introduction: Examiner’s Note (EN): Buitenweg’s MEA is equivalent to applicant’s MEA).

Conclusion

9. The prior art of record and not relied upon is considered pertinent to applicant's disclosure.

- Buitenweg et al, Finite Element Modeling of the Neuron-electrode Interface
- Eggers et al, Electronically wired Petri dish: A microfabricated interface to the biological neural network
- Buitenweg et al, Finite Element Modeling of the Neuron-Electrode Interface: Sealing Resistance and Stimulus Transfer at Transitions from Complete to Defect Sealing
- Buitenweg et al., Finite Element Modeling of the Neuron-Electrode Interface: Stimulus Transfer and Geometry

10. Claims 1-7 are rejected.
